Battery Care & Maintenance - Overview

Course Description:

Correct care and maintenance of a traction and / or power batteries can ensure best use, longevity and efficiency are achieved. With the cost of an average traction battery being a third of new electrically driven equipments purchase price it makes sense to look after this investment as well as the safety of operators who will be exposed to battery acid, possible electrocution etc. A correctly cared for traction battery will give good service for 20 years, an abused battery will often expire just after the warranty period.

This course is also suited for non traction battery care and will be modified accordingly.

Availability	On site	Duration	1/2 to 1 day - Dependant upon battery type & numbers of Delegates
Examinations	Knowledge & Skill assessment	Course Style	Knowledge and practical
Certificates	HSE Regulations Subject Specific	Additional Information	The normal in company range of batteries and equipment should be made available and a suitable room for the number of delegates will be required
