Battery Care & Maintenance - Overview

Course Description:

Correct care and maintenance of a traction and / or power batteries can ensure best use, longevity and efficiency are achieved. With the cost of an average traction battery being a third of new electrically driven equipment purchase price it makes sense to look after this investment as well as the safety of operators who will be exposed to battery acid, possible electrocution etc. A correctly cared for traction battery will give good service for 20 years, an abused battery will often expire just after the warranty period.

Availability	On site	Duration	½ to 1 day - Dependant upon battery type & numbers of Delegates
